

ENVIRONMENTAL POLICY

Clarín is committed to establishing processes and procedures which have the effect of improving environmental conditions. To that end, Clarín will strive to promote conservation, implement and maintain recycling of materials, enhance safety and health conditions at Clarín and in surrounding areas and comply with disposal rules and regulations.

Clarín utilizes steel which is comprised of at least 20% scrap materials and Clarín recycles the metal scrap created in the manufacturing process. Clarín also offers a large selection of “Green” fabrics for chairs. Clarín conserves water and heat through conservation and recycling systems that re-uses these resources in our manufacturing processes. Clarín also uses recycled corrugated and packaging materials for our products. Clarín purchases used wood pallets for transportation of our products inside and outside our facility.

Clarín regularly monitors our workplace for emissions and also for noise levels. Clarín’s safety guidelines require safety equipment to be used throughout the manufacturing facility, including safety shoes, gloves, hearing protection and eye shields.
